CHECK DNS PROPAGATION

Whether you have recently changed your DNS records, switched web host, or started a new website, checking whether the DNS records are propagated globally is essential. DNS Checker provides a free DNS propagation check service to check Domain Name System records against a selected list of DNS servers in multiple regions worldwide. Perform a quick DNS propagation lookup for any hostname or domain, and check DNS data collected from all available DNS Servers to confirm that the DNS records are fully propagated.

JS Propagation Map by DNSChecker.org

The map shows the global distribution of DNS servers. A legend indicates: Server Location (blue dot), Resolved (green checkmark), and Not Resolved (red X).
